

The perfect solutions for various uses!

Comm3-e with

movement sensor	search function	movement alarm	open end cable
			
against theft	for locating	for monitoring alarms	for data transfer

The systems can be supplied with a cigar lighter cable for 12/24V or with a mains adaptor for 220V.

a rather inconspicuous adaptor plug for Siemens' cellular phones (S25, C35i, S35i, M35i, ME45, SL45, S45) the integrated micro-processor reveals completely new possible uses such as **locating system, alarm unit and mobile watch dog.**
(Dimensions: 47x17x11 mm / casing: black polyester weight approx. 22g)

Your mobile phone becomes an alarm unit or a locating system

The advantages are obvious

- simple installation - just plug into your phone
- for forwarding occurrences to up to 3 SMS addresses and 3 further participants
- "empty battery" message and /or interruption of the power supply
- sending a "keep alive" message
- programming the system via SMS (remote control possibility)
- location with assistance of the mobile phone based on internet locating services of the network provider (not GPS)
- bugging function can be activated

Theft protection for car and motorbike

The Comm3-e with integrated movement sensor, registers the movement of a motorbike or car and informs the owner should someone be fiddling with the bike or car.

Provisional theft prevention of mobile objects

A Comm3-e with movement alarm can be installed in a matter of seconds. Attach your mobile phone with a PowerStrip®, and you have a provisional alarm unit in your boot or caravan. By means of the bugging function it is then possible to monitor the object acoustically.

Locating function

In the future, thanks to Comm3-e, boots and caravans can be traced on leaving their berths. The position of the object is formed into a self-defined "protected zone", the size of which depends on, i. a. the distance from the location and the selection of transmission masts offered by your cell phone provider. Should the object leave this "zone", an alarm will be given.

Continual burglary prevention of property

Attach the Comm3-e to the cell phone, and the mains adaptor in the wall plug and you have the perfect replacement for a high class burglar alarm not only in your own home but also in your holiday apartment or your country cottage. You will receive an alarm message by breaking and entering as well as when someone cuts off the power.
