

## Worldwide Reception via Inmarsat D+ Services

The Comm3-i System, a rather inconspicuous small white box, which, when connected to the controller (Co-100), enables the use of functions such as territorial surveillance, positional recording, prevention of burglary and theft, two-way monitoring, mobile watchdog and transmission system for data readings. Because it uses the Inmarsat D+ service, the Comm3-i System can be used practically worldwide.

# You're on board - no matter where you are

with the **Comm3-i** system !

### Wherever you are, the Comm3-i will send an alarm!

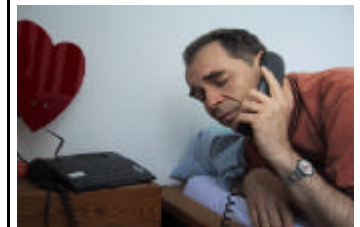

via  
SMS

via  
e-mail

via  
telefax

via telephone  
( security service)

## The perfect answers to so many questions!

### Territorial surveillance

In future, thanks to comm3-i, boots and yachts can be traced when illegitimately leaving their berths.

The vessel's berth or a set course is formed into a self-defined "protected zone". Should the vessel leave this "zone" or leaves it's predestined course, or someone tries to break in, an alarm will be given..

### Positional recording

Should a vessel leave it's position it is possible to record the position detailing latitude, longitude (town, street, height above sea level), speed and outside temperature. It is also possible to track the route. A positional record can be called up via PC (using software conform to the system), in time intervals, mileage intervals, entering or leaving a predestined area, exceeding or undercutting a predestined speed. The data can also be called up by cell phone.

### Burglary Prevention

You can leave your vessel, reassured that it is not unguarded. The Comm3-i with it's 60 inputs enables linkage of the system either to an existing alarm unit, or by installing movement and door contact sensors. If someone attempts to break in or disconnect the power supply, you will receive an alarm message.

### Mobile watchdog, commands to the vessel

Comm3-i enables you to connect gas- and fire alarm, pressure, temperature, tank level- and other sensors, which, when activated, command the COMM3-I, to alarm you. Likewise, from your PC or mobile phone, you can comfortably either switch on your refrigerator or switch off your lights.
