

## Worldwide reception via the Inmarsat-D+ service

The Comm3-i system, is part of the Comm3 system, which can transmit status and position data via the 3 communication networks radio, GSM and Inmarsat satellites. For example multiple functions are feasible such as area observation, recording of position, theft and burglary prevention, bi-direction control, mobile watchdog and a transmitting system for measurement data. The Inmarsat-D+ service for Comm3-i makes the system practically worldwide deployable.

# You have total control no matter where you are,

with the Inmarsat system

## The right system for many purposes!

### Area and route observation

In the future, thanks to Comm3-i, vehicles, which leave a stipulated area or route, can be traced.

The usual driving sector or a predetermined route can be entered as self-defined "protective zone".

Should the vehicle leave this "zone", having been stolen, or leave its predetermined route, you will be warned.

### Recording position and route

When the vehicle commences its journey, a protocol will be made with such details as longitude and latitude (town and street), altitude, speed and outside temperature, as well as a tracking protocol.

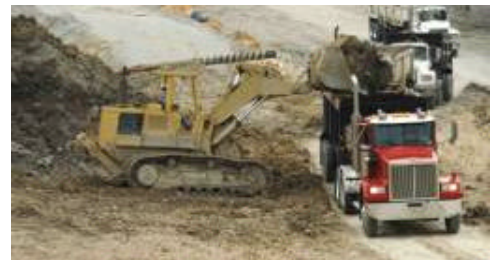

A positional record can be called up via PC (using software conform to the system), in time intervals, mileage intervals, entering or leaving a predestined area, exceeding or undercutting a predestined speed.

### Burglary Prevention

You can leave your vehicle, reassured that it is not unguarded.

The Comm3-i with its 60 inputs enables linkage of the system either to an existing alarm unit, or by installing movement and door contact sensors. If someone attempts to break in or disconnect the power supply, you will receive an alarm message.

### Mobile watchdog, commands to the vehicle

Comm3-i enables you to connect gas- and fire alarms, pressure, temperature, tank level- and other sensors, which, when activated, command the COMM3-I, to warn you.

Likewise, from your PC or mobile phone, you can comfortably either switch on or off systems in your vehicle.
