

Regatta & Race Control System (R&RCS)

The Regatta & Race Control System enables the organizers to monitor a regatta or race and its participants.

No matter whether waypoints, altitude or speed over ground, the R&RCS enables control of the race from start to finish.

By using the services of Inmarsat D+, you have practically a worldwide coverage and with permanent internet management

it can be displayed on any web site you wish. This means that the event is accessible for any user worldwide. The R&RCS opens completely new horizons for race organizers.

Backed the winner? Improve your chances

**The Regatta- & Rallye Control System -
a live experience!**

For regatta or rallye competitors

in the sky

on the track

in the water

What can the system do?

Live tracking on every home page..

...made possible by a small,
easy-to-mount box.
The box transmits the acquired GPS-position
and all other status data
via Inmarsat D+ satellite services
from anywhere in the world.
Our EDPCHQ
will process this data
and
transmit them practically live
to any place in the world.

Start to finish control

Every race has to be started.
Cheating is impossible.
The R&RCS makes sure of that.
The start position is exactly monitored
no matter whereabouts in the world the
competitors are,
. The R&RCS assures them that the race
organizers are controlling them continually.
Every deviation from
the predestined course
will be taken to protocol..

Live at the scene of the event/or in Internet

Automatically updated on screen
at the event, and at the same time
on your home page and/or
that of your sponsor.
You can follow and commentate the race live.
Mit Hilfe des R & RCS
Make your racing event renowned
throughout the world.
Increase the popularity
of your brand name.
Extra turnover from advertising.

Our offer - "All-in-one"

EDPC, hard-and software, "after sale" service, support, on-the-
scene assistance, hiring and sales.

Turn you event into an experience!
