

About us

FK&S is engaged in the manufacture and marketing of communication and safety technology components, with the main emphasis on: antenna technology, mobile remote data transfer technology, locating, form and positive recognition technology, electronic security technology. Founded in 1995, it was transformed in 1996 into a limited company (GmbH). Situated at the foot of the Fahner Heights, a mountain range near Erfurt, the capital of Thuringia, the initial aim was the marketing, installation and maintenance of mobile phone and security technology products. From 1999, the company distinguished itself in the field of satellite supported signal and information transmission within the framework of the radio transmission and reception technology, with a fundamental orientation in the direction of portable or other. mobile system solutions as well as mobile radio technology. In this connection, the modern solutions of the wave guide and circuit technique came to their fullest advantage. Especially in the field of mobile communication, future oriented antennae and system solutions will be produced to the exact requirements of the customer. Close relationships to other manufacturers and commercial companies ensure **FK&S** the necessary feedback to national as well as international markets on the one hand while on the other these relationships are a helpful factor in the marketing of the products and the system solutions worldwide. On this basis, self-developed products in the above mentioned fields will be of course marketed together with outside products.
